C12 FEATURES & OPTIONS

C15 ENGINEERING DATA

C26 STRUCTURAL SUPPORT

Series 3000 Cooling Tower

Trusted Reliability and Highest Efficiency

The Series 3000 Cooling Tower leads the industry with the highest efficiency lowest operating cost, maintenance and installation, greatest layout flexibility, resulting in trusted reliability.

171 - 1,446 tons

Up to 4,500 USGPM^[1]

Crossflow // Axial Fan // Induced Draft

TriArmor[®]
CORROSION PROTECTION SYSTEM

EVERTOUGH[™]
CONSTRUCTION

ENDURADRIVE[®]
Fan System

XE Models

Series 3000 Benefits

Lowest Energy Usage

UP TO 40% MORE ENERGY EFFICIENT WITH XE MODELS^[1]

- Extremely efficient XE Models are at least two times more energy efficient than the minimum requirements established in ASHRAE Standard 90.1
- XE models help to contribute to Energy and Atmosphere LEED® Credits (EAc1)
- Average payback of less than two years with BAC's enhanced selections which include user-defined life-cycle cost inputs based on energy savings and minimum payback

Lowest Maintenance Costs

FASTEST ACCESS TO KEY COMPONENTS

- Easiest access to the cold water basin, hot water basin, and the drive system with the crossflow design, large access doors, and an optional internal walkway
- Fast inspection of the spray water distribution system while the unit is in operation
- Virtually eliminate maintenance with the optional ENDURADRIVE® Fan System

Easiest Installation

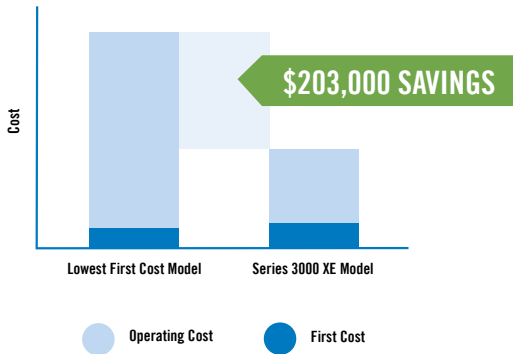

PRE-ASSEMBLED PLATFORMS AND LADDERS

- Reduce on-site labor requirements and ensure on-time commissioning with factory pre-assembled external platform and ladder options
- Ensure proper fit for any application with flexible inlet/outlet piping connection locations
- For field assembly, knockdown units are available
- Optional basinless construction is ideal for installations that use a common sump for multiple tower cell

Increased Layout Flexibility

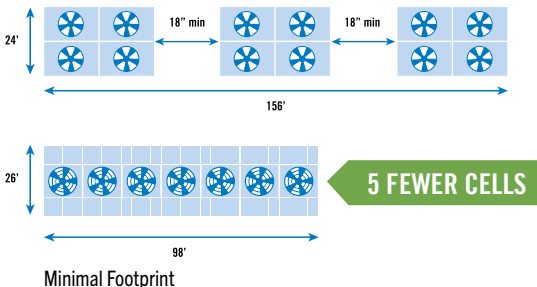

MINIMIZE FOOTPRINT

- For large projects, minimize space needed by fitting multiple units together
- Installations can be easily expanded with additional cooling tower cells
- Variety of options to meet layout requirements, including a range of structural steel spacings and a velocity recovery stack for additional cooling

Note: Operating costs based on fan kW x \$0.12/kWh x 2500EFLH (equivalent full load hours) x 20 years (2011 ASHRAE Handbook HVAC Applications) x 3% per year energy inflation factor.

Operating Cost Comparison

Series 3000 Cooling Tower Principle of Operation

NOTE:

1. Compared to standard cooling towers.

Series 3000 Design Details

1 Heavy-Duty Construction

- G-235 mill galvanized steel frame
- FRP casing panels are corrosion resistant, ensuring long life
- Meets seismic and wind requirements for International Building Code, FM and HCAI approval

2 BALTIDRIVE® Power Train

(The optional ENDURADRIVE® Fan System is shown)

- Premium quality, solid-backed, multi-groove belt
- Corrosion resistant materials of construction
- Heavy-duty bearings L₁₀ 80,000 hours
- Premium efficient/inverter duty-ready motors are standard
- Extended lubrication lines with grease fittings are standard
- 7-year motor warranty⁽¹⁾; 5-year warranty on drive components

3 Low HP Axial Fan(s)

- Quiet operation
- High efficiency
- Corrosion resistant aluminum

4 Water Distribution System

- Steel covers in easy to remove sections reduce maintenance
- Low pump head gravity distribution basins reduces system pump energy
- Visible and accessible during operation
- Large orifice, non-clog nozzles
- Standard weir dams can accommodate a flow range of 50% to 100%

5 BACross® Fill with Integral Drift Eliminators

- High efficiency heat transfer surface
- Recyclable polyvinyl chloride (PVC)
- Impervious to rot, decay, and biological attack
- Flame spread rating of 5 per ASTM E84

6 Combined Inlet Shields

- Corrosion and UV resistant
- Less sunlight and debris enters the cold water basin; deters algae growth and reduces cleaning requirements

7 Cold Water Basin

- Sloped cold basin for easy cleaning
- Suction strainer with anti-vortex hood can be removed with the flip of a single latch for easy cleaning and maintenance

8 Hinged Access Doors

- Inward hinged door on each end wall allows easy access to the interior of the unit

NOTE:

1. Motors are warranted for 7 years from date of shipment when space heaters are field-wired at time of initial installation.

Series 3000 Features & Options

171 - 1,446 tons^[1] // Up to 4,500 USGPM^[1] // Crossflow // Axial Fan // Induced Draft

Features & Options	Page	Description
MATERIALS OF CONSTRUCTION		
G-235 Galvanized Steel	H3	Universally recognized for its strength and durability
TriArmor® Corrosion Protection System	H3	The ultimate in corrosion and leak protection for the basin at the best value; 10-year leak & corrosion warranty
EVERTOUGH™ Construction	H4	Combines the most corrosion resistant materials at the best value for most water chemistries including TriArmor® Corrosion Protection (cold water basin), Baltibond® Hybrid Coating (structure), stainless steel (submerged components in the cold water basin) fiberglass reinforced polymer (casing panels and louvers), and pultruded fiberglass reinforced polymer (hot water basins).
Baltibond® Hybrid Coating	H4	Thermosetting hybrid polymer coating baked onto the G-235 galvanized steel creating another layer of protection
Welded Stainless Steel Cold Water Basin	H4	All steel panels and structural members of the basin are Type 304 stainless steel for increased corrosion resistance or job requirement
Stainless Steel Hot Water Basin	H5	The hot water basins and basin covers are constructed of Type 304 stainless steel
JE Premier Series® Construction	H6	All unit steel panels, structural elements, and the welded basin are Type 304 stainless steel for increased corrosion resistance or job requirement, 5 year leak proof warranty
Basinless Unit Construction	H6	Enables units to be directly installed on new or existing cold water basins; simplifies piping and pumping for multi cells, provides the most cost effective option to replace field-erected equipment
Fiberglass Reinforced Polymer (FRP) Casing Panels	H6	Used with BAC's durable frame construction, FRP casing panels offer a more durable corrosion resistant unit
Steel Casing Panels and Louvers	H6	Available in G-235 mill galvanized steel, Baltibond® Hybrid Coating, and stainless steel
DRIVE SYSTEM^[2]		
Baltidrive® Power Train	H12	Belt driven system with a multigroove and cast aluminum sheaves; reliable and easy to maintain
ENDURADRIVE® Fan System ^[3]	H12	Direct-drive fan system offers the highest reliability, lowest maintenance and energy costs giving you total peace of mind; 7 year motor warranty
Extended Lubrication Lines	H13	Easy lubrication of the fan shaft bearings from inside the access door
Baltiguard™ Fan System	H14	Two motors per fan; one motor for full speed and load, the other is a pony motor with 2/3 capacity
Gear Drive System, Close-Coupled Motor	H14	A nickel-alloy steel shaft, casehardened gears, self lubrication, and a single piece, gray cast iron; gear drive and couplings selected with a 2.0 service factor
Gear Drive System, Externally Mounted Motor	H15	A non-corrosive carbon-fiber composite drive shaft with stainless steel hubs is selected with a 2.0 service factor
Vibration Cutout Switch	H16	Protects against rotating equipment failure
COLD WATER BASIN		
Mechanical Water Level Control	H17	Maintains the water level in the basin with a float valve
Electric Water Level Control	H17	Maintains the water level with a conductivity actuator and a solenoid valve
Low and High Level Alarm Float Switches	H17	Alerts operators to abnormal conditions to ensure the highest system reliability
Side Outlet Depressed Sump Box	H17	Available for field installation below the base of the tower; facilitates horizontal piping below the basin, and is a compact alternative to using an elbow in the piping arrangement, saving on both installation time and cost
Steam Coil/Steam Injector Basin Freeze Protection	H18	Available to provide basin freeze protection
Basin Sweeper Piping	H18	Complete basin piping system with nozzles; easily connect side stream filtration equipment by others
Basin Heaters	H18	Protect the basin water from freeze-up in below freezing ambient conditions
MULTI CELL UNIT		
Flume Box ^[4]	H21	Balances the water level in the cold water basins of multi cell units
Equalizer	H21	Equalizer connections are available for multi cell cooling towers in lieu of a flume box; allows for easy isolation of a cell while continuing system operation for winter operation, maintenance, or inspection

Features & Options	Page	Description
WATER DISTRIBUTION SYSTEM		
Easy to Inspect Water Distribution System	—	Inspect the water distribution system while the unit is operating
Top Inlet Connections	—	Top inlet connections to each of the hot water basins
Weir Dams	H23	Weir dams are used to successfully modulate the water flow; the hot water basin can accommodate a flow range of 50% to 100% of the design flow
EASY CONNECT® Piping Arrangement	H24	Simplifies water inlet piping by automatically balancing the flow within each cell, eliminating the need for flow balancing valve
FILL		
Fill	H26	PVC fill for applications with entering water temperatures up to 130°F (54.4°C)
High Temperature Fill	H26	HPVC fill for applications with entering water temperatures up to 140°F (60°C)
SHIPPING AND RIGGING		
Rigging Guides	H29	Allow easy alignment and engagement of top and bottom sections, especially critical during multi cell installations
Knockdown Units	H29	The unit ships disassembled for jobs where there are crane or other site limitations
FANS AND SOUND		
Axial Fan	H31	The axial fan optimizes low sound levels and maximizes thermal performance
Low Sound Fan	H31	Reduces sound up to 9 dBA
Whisper Quiet Fan	H31	Reduces sound up to 19 dBA
Sound Attenuation	H31	Available for the air intake and discharge to further reduce sound levels
AIR INTAKE		
Louvers	H33	Specifically designed with greater spacing between louvers (12") and are completely separate from the fill section, reducing scale and ice accumulation and allowing for unobstructed air flow through the unit
Combined Inlet Shields	H33	Constructed from corrosion and UV resistant PVC, bent flow path blocks sunlight from the cold water basin and fill section and acts as a screen to prevent debris from entering the unit
Air Intake Screens	H33	1" x 1" wire mesh screens factory-installed over the air intake louvers to prevent debris from entering the unit
AIR DISCHARGE		
Fan Cowl Extensions	H35	Elevate the air discharge to the top of parapet walls for maximum thermal capacity
Velocity Recovery (VR) Stacks	H35	A conical fan cowl extension that reduces the discharge air pressure, moving more air for higher added thermal capacity
ACCESS		
Large Plenum Area for Access	—	Two large hinged access doors are connected by an elevated walkway, provides access to the collection basin and drive system
Motor Removal System	H38	Includes motor removal davit arm(s) to facilitate motor replacement
External Platforms and Ladder Packages	H38	Factory preassembled and pre-fitted, attaches quickly in the field; easily inspect the spray distribution system while the unit is in operation
Access Door Platform and Ladder Packages	H39	Easily access the unit when installed on elevated supports
Handrail and Ladder Packages	H39	Provide safe access to the top of the unit for maintenance to the distribution system
Internal Walkway	H40	Allows easy access to the plenum area of the basin, make-up, fill, and drive system
Internal Service Platform and Ladder Packages	H40	Easily access the motor and drive assemblies; available on two piece units

NOTES:

- Nominal tons of cooling represents the capability to cool 3 USGPM of water from a 95°F entering water temperature to an 85°F leaving water temperature at a 78°F entering wet-bulb temperature.
- ENDURADRIIVE® Fan System is standard on S2E-1424-14U and S3E-1424-14W but optional on other models.
- Motors are warranted for 7 years from date of shipment when space heaters are field-wired at time of initial installation.
- Flume boxes are standard on all multi cell units.

Series 3000 Engineering Data

NOTES:

1. The E dimension represents the distance between the outer edge of the unit and the connection. For 8.5', 10', and 12' wide units this dimension is 1-1/8". The 14' wide units the E dimension is 1/2".
2. The following units ship in two sections per cell. The top section is the heaviest and tallest. Top section heights are:

S3E Model	Catalog Upper Section With Installed Fan Guard Height (in)	S3E Model	Catalog Upper Section With Installed Fan Guard Height (in)

NOTES FOR SINGLE CELL UNITS:

- S3E-1222-14T, S3E-1424-12T, S3E-1424-13T and S3E-1424-14T are supplied with a gear drive system as standard.
- S3E-1424-14U and S3E-1424-14W are supplied with the ENDURADRIVE® Fan System as standard.
- Nominal tons of cooling represents the capability to cool 3 USGPM of water from a 95°F entering water temperature to an 85°F leaving water temperature at a 78°F entering wet-bulb temperature.
- Operating weight is based on the water level in the cold water basin at overflow height. If a lower operating weight is needed to meet design requirements, your local BAC Representative can provide additional assistance.
- Refer to **page C15** for dimensional reference drawings.
- Models shipped with an optional gear drive or Low Sound Fan may have heights up to 10.5" greater than shown. For units with Whisper Quiet Fans please contact your local BAC Representative for accurate height dimensions.

Do not use for construction. Refer to factory certified dimensions. This catalog includes data current at the time of publication, which should be reconfirmed at the time of purchase. Up-to-date engineering data, free product selection software, and more can be found at BaltimoreAircoil.com.

NOTES FOR SINGLE CELL UNITS:

1. S3E-1222-14T, S3E-1424-12T, S3E-1424-13T and S3E-1424-14T are supplied with a gear drive system as standard.
2. S3E-1424-14U and S3E-1424-14W are supplied with the ENDURADRIIVE® Fan System as standard.
3. Nominal tons of cooling represents the capability to cool 3 USGPM of water from a 95°F entering water temperature to an 85°F leaving water temperature at a 78°F entering wet-bulb temperature.
4. Operating weight is based on the water level in the cold water basin at overflow height. If a lower operating weight is needed to meet design requirements, your local BAC Representative can provide additional assistance.
5. Refer to **page C15** for dimensional reference drawings.
6. Models shipped with an optional gear drive or Low Sound Fan may have heights up to 10.5" greater than shown. For units with Whisper Quiet Fans please contact your local BAC Representative for accurate height dimensions.

Do not use for construction. Refer to factory certified dimensions. This catalog includes data current at the time of publication, which should be reconfirmed at the time of purchase. Up-to-date engineering data, free product selection software, and more can be found at BaltimoreAircoil.com.

NOTES FOR CONNECTION DIMENSIONS:

1. For dimension locations, see **page C23**.
2. The specific size of the inlet and outlet connection may vary with the design cooling water flow rate.
3. Unless otherwise indicated, all connections 3" and smaller are male pipe thread, and connections 4" and larger are beveled for welding and grooved to suit a mechanical coupling.
4. On double cell units, connections are the same size but are located on both ends of the unit. Refer to **page C15** for side elevation view.

Do not use for construction. Refer to factory certified dimensions. This catalog includes data current at the time of publication, which should be reconfirmed at the time of purchase. Up-to-date engineering data, free product selection software, and more can be found at BaltimoreAircoil.com.

NOTES FOR BASINLESS DATA:

1. Purchaser to design, construct, and furnish basin (including anchor bolts) in accordance with requirements given. Purchaser must also supply sump, overflow, drain, cleanout, and water make-up to suit requirements.
2. All anchor bolts shall be 3/4" diameter, 1 1/2" projection ($\pm 1/4"$), fully threaded. Bolt to have one nut and washer. Anchor bolt and column bearing point locations and elevations must be maintained $\pm 1/8"$.
3. Pier dimensions shown are minimum bearing surfaces required for the tower structure and do not include corner chamfers on the concrete piers.
4. Fill to be located below the operating water level (see Side View of Concrete Basin for All Models on **page C23**).
5. Maximum operating weight does not include concrete basin or water retained in the basin.

Do not use for construction. Refer to factory certified dimensions. This catalog includes data current at the time of publication, which should be reconfirmed at the time of purchase. Up-to-date engineering data, free product selection software, and more can be found at BaltimoreAircoil.com.

Series 3000 Structural Support

The recommended support arrangement for the Series 3000 Cooling Tower consists of parallel structural members positioned as shown in the drawings on [page C27](#). In addition to providing adequate support, the members also serve to raise the unit above any solid foundation to assure access to the bottom of the tower. The Series 3000 Cooling Tower may also be supported on columns at the anchor bolt locations shown in Plan A (single cell) or Plan C (double cell). Alternate support arrangements can be found on [page C28](#). To support a Series 3000 Cooling Tower on columns with an alternate steel support arrangement or the optional upgraded seismic and wind rated unit, consult your local BAC Representative.

NOTES FOR BASINLESS DATA:

1. Support members and anchor bolts shall be designed, furnished, and installed by others.
2. Design of support members and anchor bolts shall be in accordance with the strength and serviceability requirements of the applicable building code and project specifications.
3. Support members shall be level at the top.
4. Refer to the certified unit support drawing for loading and additional support requirements.
5. For support spacing other than shown, mounting holes in the unit are to be drilled by others.

Series 3000

Alternative Structural Support

The Series 3000 Cooling Towers (excluding basinless option) can accommodate Plan A (single cell) and Plan C (double cell) support with alternative spacing of anchor bolt hole center lines as listed in the table below. BAC provides specific anchorage drawings in the job file that reflect the revised anchor bolt hole center line dimension only. The unit will have pre-punched anchor bolt holes in the standard and minimum hole spacing locations only. All other alternative anchor bolt holes are located and drilled by others.

Model Number	Standard Spacing "A" Dimension	Spacing Range to Avoid due to Cold Water Basins Seams Interfere with Bolt Hole Locations	Maximum Spacing "A" Dimension	Minimum Spacing "A" Dimension
S3E/XES3E-8518-x	9'-4"	8'-5 1/2" thru 7'-9 3/8"	16'-0"	7'-5"
S3E/XES3E-1020-x	11'-4"	10'-1 3/4" thru 9'-5 5/8"	16'-0"	8'-0"
S3E/XES3E-1222-x	12'-10"	11'-2 3/4" thru 11'-10 7/8"	16'-0"	9'-6"
S3E/XES3E-1424-x	15'-4"	--	16'-0"	12'-0"

NOTE:

1. The standard structural support figures on **page C27** apply to alternative structural support as well.
